

DRaaS

Secure DRaaS with Veeam

# Integrate.

Streamline your entire data protection experience with a single, unified management interface.

## An all-inclusive approach to planning, onboarding, testing, and event-driven failover.

The importance of a disaster recovery plan cannot be overstated. When unforeseen events wreak havoc on your day-to-day operations—regardless of industry or company size—your organization needs to recover quickly while continuing to provide services to your clients. From data security breaches to natural disasters, you need to have a plan in place to combat any type of disaster. Not having a disaster recovery plan in place can put your organization at risk of financial costs, reputation loss, and much more.

A disaster recovery plan is a set of actions to be taken before, during, and after a disaster. Your organization can't always avoid disasters, but having a plan helps to minimize the potential damage and restore operations quickly.

iland Secure DRaaS with Veeam integrates the leading solution for backup, disaster recovery, and hyper-availability with iland Secure Cloud. This integration delivers peace of mind with complete visibility into your DR environment and control over your entire resilient data protection platform.

With years of experience deploying disaster recovery solutions, iland provides a true partnership for customers. Our comprehensive methodology is delivered by an experienced team of engineers helping to design and implement a purpose-built DR plan that achieves your business objectives.

### Key benefits.
