

Protect Microsoft 365.

Using the cloud to protect your cloud.

You've moved your email and collaboration software to the cloud, however you still need to protect it with backups. With so many options, you're probably struggling to decide on which to trust.

With over a decade of award-winning data protection solutions, iland's proven platform and console can protect your Microsoft 365 data alongside your VMs.

iland makes it simple, by relieving the burden of maintaining backup infrastructure and storage. However, you still retain control of when the backups will occur, with extensive options for when and how to restore your data.

All your data is encrypted at every stage and maintained by a team of Veeam experts unmatched in the cloud.

The top 5 differentiators of iland versus other M365 backup providers

1. **A more complete solution** – iland offers a single console for managing M365 backups, VM backups, disaster recovery, public and hosted private clouds, and object storage
2. **Backup scheduling** – there is no one-size-fits-all approach to data protection, so iland gives you direct control of the time and frequency of your M365 backups
3. **Restore flexibility** – with the ability to both restore directly to M365 and download restored files, iland provides more restoration options in the console than most competitors.
4. **Unmatched Veeam experience** – no other Veeam cloud service provider can claim the length or scale of experience with Veeam.
5. **Customer support** – included at no extra cost, benefit from a tier 2/3 support desk with a 94% satisfaction rating, account management, and direct access to our compliance team

365

Secure Cloud Backup
for Microsoft 365

Picking the right Microsoft 365 backup cloud for your business.

What are your RPO/backup frequency requirements?

iland creates backups once per day, by default, but customers can define their own custom schedule based on specific days of the week or a periodic frequency. Additionally, on-demand backups can be created at any time.

How much do you want to manage your M365 backups and restores?

iland takes care of all of the processing, storage infrastructure, and M365 connectivity, while providing visibility of all jobs to our customers. The only thing customers need to do is execute restores when needed.

How do you plan to recover from disasters with wide-ranging impacts to your team?

Customers can restore from any point in time, can restore email and files to their original location, to a customer-defined restoration folder, to another user's account, or directly download restored files, including as a PST file.

What other data protection needs do you have?

Customers use a single platform for managing and storing M365 and VMware VM backups in the cloud, as well as robust disaster recovery automation in the cloud. Managed services and enhanced on-boarding services are available to further simplify your data protection needs.

	iland	DIY	Other Veeam CSPs	SaaS
Integrated Interface	M365 backup, BaaS, DRaaS, IaaS, Object Storage	Product dependent	M365 backup, BaaS, DRaaS	Sometimes other SaaS application backup
